

Indoor Grow Room Dehumidification & Climate Control

Desert Aire's GrowAire™

Dehumidification Systems are specifically designed for indoor farming and grow room and drying room climate control and dehumidification.

These Dehumidifiers feature scalable designs to size grow rooms, commercial greenhouse and indoor farming solutions for peak cooling loads when plants are small; and then regulate humidity levels as plants mature – eliminating the need to purchase separate commercial dehumidification and air conditioning equipment.

Precise Space Dew Point & Vapor Pressure Deficit (VPD) Control.

**Grow Aire Dehumidifiers,
4-60 Tons**

FEATURES:

- Capacity to treat growing areas greater than 5,000 sq ft.
- Indoor, outdoor and roof curb installation.
- Optimized refrigeration system with variable SHR design.
- Packaged or split air and water cooled designs.
- Small Footprint Indoor Design.
- Air cooled units fully operational down to -30F (-35C).
- Electric, Hot and Water Coil auxiliary heat options.
- All 3-phase voltages available.
- Integral microprocessor controller with all sensors.
